The TMG has been striving in the improvement of emergency medical care and in-home medical care and establishment of local medical care system where residents can receive appropriate medical services for their symptoms and actively participate in their medical care, aiming at the realization of patient-oriented, safe and secure medical care that is available 365-days and 24-hours.

In the Metropolitan Area, there are medical facilities of various sizes and capacities, ranging from the best university hospitals in Japan, which offer cutting-edge medical care, to community-based clinics providing close-to-home care.

### Current Status of Medical Facilities

In the Metropolitan Area, there are medical facilities of various sizes and capacities, ranging from the best university hospitals in Japan, which offer cutting-edge medical care, to community-based clinics providing close-to-home care.

"2016 Report on Hospitals"

### Tokyo Metropolitan Health and Medical Care Plan

The “Tokyo Metropolitan Health and Medical Care Plan” (revised in March 2018) (covering the period between 2018 and 2023), has been defined as a basic and integrated plan that clarifies TMG’s plans regarding medical care.

This Plan, in order to maintain and develop the medical service system in Tokyo for a time when baby-boomers reach the later stages of old age in 2025, contains specific measures for implementing the concept of the Plan integrating the “Tokyo Regional Medical Plan,” which was formulated in July 2016.

### Basic Points and Principles of the Plan

Under the Tokyo Regional Medical Plan, four basic objectives to ensure that “everyone can continue to receive high-quality medical care and enjoy life in Tokyo with peace of mind, which is the “Grand design of the medical plan for the year 2025 in Tokyo,” have been set forth.

The Tokyo Metropolitan Health and Medical Care Plan aims to achieve and promote specific measures for implementing the concept of the Tokyo Regional Medical Plan.

---

**Four basic objectives**

| I | A structure to provide advanced and innovative medical care, which continues to develop in the future |
| II | Creation of a medical partnership system that seamlessly makes use of Tokyo’s resources |
| III | Improved medical care that both offers cures and supports patients using a regional, comprehensive care system |
| IV | Acquisition and training of human resources to build a where everyone can enjoy life with peace of mind |
To achieve a high-quality, safe, and secure health and medical care system, the TMG provides health and medical information from the perspective of Tokyo residents. In addition, medical institutions, administrative agencies, and Tokyo residents, as bodies promoting the Plan, play their respective roles to promote health throughout all life stages and to secure a seamless medical collaboration system from acute stage and recovery stage to home care.

Furthermore, the TMG is enhancing the system where two elements mutually support each other: the provision of consistent services in the areas of health, medical care, and welfare, and the system to protect Tokyo residents from health crises.

### System for Promoting the Plan

The progress of the Plan and benchmarks are evaluated and examined by councils established for each disease and project. Status is evaluated and examined on a regular basis by the “Tokyo Metropolitan Health and Medical Care Plan Promotion Council,” comprising medical care service providers such as doctors and nurses, medical care service receivers, and academic experts.

Furthermore, promoting the differentiation in facility functionality and collaboration and in-home medical care is discussed by the “Coordination Committee for Regional Medical Care Plan,” comprising regional medical institutions, related medical organizations, insurers, municipalities, etc.

### Provision of Medical Information

The TMG provides information about medical institutions and provide support in which active provision of information by medical institutions is promoted so that the residents (patients) have sufficient information to identify desired medical service.

### Tokyo Metropolitan Health and Medical Information Center

The Tokyo Metropolitan Health and Medical Information Center has been established as a general center to handle consultations on medical issues and provide information about medical institutions.
Counseling on Health, Medical Care and Welfare Affairs

Expert counselors offer advice to or consult with residents of Tokyo.

Tokyo Medical Institution Information Service “HIMAWARI”

In line with the Medical Practices Information Provision Program, the information received from medical institutions in Tokyo is disclosed on the Internet.

Medical institutions near your home or workplace are searchable by specifying a location on this Website, along with a substantial amount of detailed information such as available departments, operation hours, access, available medical and diagnostic equipment, available tests, etc.

Website: http://www.himawari.metro.tokyo.jp/
Mobile Site: http://www.himawari.metro.tokyo.jp/kt/

Medical Information Service in Foreign Languages
(Available languages: English, Chinese, Korean, Thai and Spanish)

Counselors offer non-Japanese residents information on medical institutions where medical services in foreign languages are available.

Tel: 03-5285-8181 (9 am to 8 pm everyday)

Medical Information Navigation for Reassurance in Everyday Life

Information is provided through pamphlets and the website to ensure correct understanding on how to receive emergency care and consultation services, along with details on medical costs for hospitalization, and proper use of medical institutions.

Tokyo Children's Medical Care Guide

The Tokyo Children’s Medical Care Guide is a website that provides basic knowledge on illnesses and how to treat injuries for children between ages 0 to 5.

Medical Care for International Patients

In order to cope with an increasing number of international patients, the TMG supports medical institutions that make efforts to enhance the system for accepting international patients. In addition, the TMG strives to provide medical information to international patients effectively and aims to establish a system that helps them see doctors in response to their symptoms without feeling anxiety.

Support for Medical Institutions

In order to promote coordination of the system for accepting international patients at medical institutions, the TMG supports hospitals that make efforts to acquire certification, “JIMP (Japan Medical Service Accreditation for International Patients)” and medical institutions that prepare brochures for international patients and materials provided in the institutions in multiple languages. The TMG also provides training for medical institutions on how to respond to international patients and a telephone interpreting service for emergencies.

Emergency Interpretation Service for Medical Institutions
(Available in English, Chinese, Korean, Thai, Spanish, and French)

A telephone interpreting service is offered to registered medical institutions that have patients in an emergency condition and cannot implement the appropriate treatment due to their insufficient Japanese skills.

English/Chinese
Weekdays from 5:00 pm to 9:00 am (next morning)
Holidays, etc. from 9:00 am to 9:00 am (next morning)

Korean/Thai/Spanish/French
Weekdays from 5:00 pm to 8:00 pm
Holidays, etc. from 9:00 am to 8:00 pm

Establishment of a System which Help International Patients See Doctors in Response to their Symptoms without Anxiety

The TMG will establish a system to help international patients see doctors without anxiety by organizing meetings to strengthen the collaboration of related agencies such as administrations, medical institutions, related organizations, and accommodation facilities and by collaborating with regional medical institutions and related agencies.

Improvement of Health and Medical Care Service Systems in the Community

With the increasing and diversified demand for medical care services, the TMG has been addressing the establishment of a medical service provision system in communities by supplementing and maintaining medical services running short in local areas in quantity, quality and function.

Promotion of Medical Care Cooperation System by Disease

There are many life style related disease patients with high mortality, such as cancer and strokes, and they require detailed attention covering emergency medical care through to welfare services depending on the course of the symptoms.

Establishment of Medical Cooperation System for Stroke

The TMG aims to secure a system in which a patient who has a stroke is quickly and appropriately transported to a medical institution handling acute patients, and once the patient is out of the acute period, to establish a system to provide seamless medical and nursing care services in the community from treatment, and recovery to home rehabilitation.

Establishment of Medical Cooperation System for Diabetes

The TMG aims to promote consistent measures against diabetes from prevention to treatment, and to prevent diabetes patients from becoming severe. It
will also work toward prevention of complications and establish a coordinating system between community hospitals and clinics.

Rehabilitation System
The TMG supports the rehabilitation system in communities through training for care providers at regional rehabilitation support centers (designated in each secondary health care zone) as well as the establishment of Tokyo Metropolitan Rehabilitation Hospital, which plays a central role in rehabilitation provision. It will also support efforts to secure rehabilitation wards for convalescing patients.

Dental Health Care
The TMG has set up its own dental health objective, “Good Teeth Tokyo (Ii-ha Tokyo),” under the Tokyo Metropolitan Dental Health Promotion Plan, which portrays ideal images of Tokyo residents. It sets forth a slogan for Tokyo residents: “enjoy meals and live your lives with smiles on your faces as long as you can.” While promoting Tokyo residents’ self-help efforts, it promotes dental health care for Tokyo residents in cooperation with municipalities, etc. It has also established the Tokyo Metropolitan Center for Oral Health for Persons with Disabilities to provide dental examinations to children (persons) with mental or physical disabilities. Further, to promote in-home dental examinations, the TMG provides support for eating/swallowing disorders often seen among the elderly requiring long-term care and subsidies for maintenance fees of medical equipment required for in-home dental examinations.

Enhancing In-home Medical Assistance Systems
Designed to accommodate a rapidly aging society, these systems offer an in-home medical care environment ensuring that all people can live in their communities in safety and with peace of mind, even when they need medical and nursing care.

Ensuring an At-home Medical Care Environment in the Community
In order to enhance medical and long-term care collaboration in the community, the TMG supports initiatives taken by municipalities that set up in-home medical care assistance offices. It also establishes a seamless in-home medical care and long-term care service system, such as securing a 24-hour medical treatment system and backup beds at hospitals. In addition, it shares information among medical and long-term care staff. Furthermore, it establishes an in-home medical care system for young children who need it in line with local needs.

Train and Secure Human Resources engaged in In-home Medical Care
Training for Human Resources engaged in In-home Medical Care
The TMG conducts training for doctors who play a key role in in-home medical care in their community to enhance the collaboration among various professionals centering on the leaders based on the situation in each area.

Initiatives to Promote Entry into In-home Medical Care
For doctors at clinics who have not started an in-home medical care service, the TMG organizes seminars on in-home medical care to promote their entry. In addition, it trains and secures personnel who provide in-home medical care services for children by providing training to in-home medical care doctors and other pediatric care professionals.

Promoting a Smooth Transition to Life with In-home Medical Care
The TMG promotes activities of medical institutions that assist with hospital admissions and discharges, in order to develop an environment where inpatients can transition to a life with in-home medical care without feeling anxiety. It also further promotes collaborations and information sharing among medical institutions to which patients are admitted and regional medical and long-term care staff from (before) the time of admission. In addition, it promotes mutual understanding among medical institutions to which patients are admitted and regional medical and long-term care staff.

Tokyo Metropolitan Plan to Promote Cancer Control Programs
The “Tokyo Metropolitan Plan to Promote Cancer Control Programs”, which is a comprehensive plan to counteract cancer, was formulated in March 2018 to cover the period FY2018 to FY2023. The plan forecasts the accelerated aging of Tokyo residents and the diversified needs of cancer patients, and therefore calls for further enhancement and strengthening of cancer control measures. Furthermore, it addresses new challenges such as establishment of a system of medical care services and consultation support services in response to each life stage including AYA generation.

Coordination of Structures to Deliver Cancer Treatment
In order to provide high-level cancer treatment to all residents, the TMG accredits hospitals with cancer treatment skills as high-level as the ones designated by the national government as "Cooperating Cancer Treatment Hospitals" and “Regional Cancer Treatment Hospitals,” as "Tokyo-designated Cancer Treatment Hospitals," and hospitals capable of cancer treatment for specific parts of the body at levels as high as the national hospital, designated as "Tokyo Cancer Treatment Cooperation Hospitals." This comprehensively addresses specialized treatment, palliative care, medical collaboration, etc.

The TMG is also training healthcare providers about palliative care to establish a system that provides
seamless palliative care, wherever patients live, from the early stages of treatment to medical care at home. Furthermore, the TMG will conduct surveys on medical institutions in Tokyo to improve the palliative care.

Promotion of Cooperation in the Treatment of Pediatric Cancer
To improve the medical level at which patients with rare childhood cancers are treated, develop a treatment network of medical institutions in Tokyo treating childhood cancer is being coordinated, in order to strengthen cooperation in treatment and improve consultation and support systems and provide training for local medical institutions. (Medical Policy Section, Medical Policy Division, Bureau of Social Welfare and Public Health)

Establishment of a System to Provide Medical Services for Cancer Patients of the AYA Generation
The current status of medical services provided by medical institutions, etc. for the AYA generation is being surveyed to establish an appropriate medical system for cancer patients of the AYA generation in Tokyo.

(*) AYA generation stands for Adolescent and Young Adult generation, and mainly refers to those between the ages of 15 and 40.

Promotion for Achieving a Balance between Cancer Treatment and Work

The TMG supports cancer patients coping with both treatment and work by conducting surveys on the employment of cancer patients and by building awareness among businesses.

Promotion of Cancer Research
The Tokyo Metropolitan Institute of Medical Science promotes the development of diagnosis methods of the next generation and curative medicine in collaboration with municipal hospitals and medical institutions in Tokyo.

Tokyo Metropolitan Portal Site of Cancer
“Tokyo Metropolitan Portal Site of Cancer” that provides various information on cancer has been launched.

Enhancement of Emergency Medical Care
We are striving to create an emergency medical care system from initial through to secondary and tertiary care, which provides appropriate medical care promptly at anytime, anyplace, and for all patients in response to each symptom.

Primary Emergency Care: Treatment for patients who do not require hospital admission.
Secondary Emergency Care: Treatment for moderately sick patients who require hospital admission

Tertiary Emergency Care: Treatment for patients in critical condition, whose life may be at stake

Weekend/Holiday/Night time Treatment Program
In order to be able to treat patients who require hospitalization (for both surgery and internal medicine) on a 24-hour, 365-day basis, we guarantee access to hospital beds for emergency admissions on holidays and at night.

Program to Improve Emergency Transportation and Patient Admission
In order to reduce the number of cases in which hospitals are unable to admit patients transported under emergency conditions, we have ensured that staff other than doctors and nurses are in place to handle coordination (Emergency Medical Technician) and are improving our admissions systems.

Coordination of Transportation for Transfer between Hospitals
When patients are transported from other hospitals, they often use hospital ambulances or transportation service providers for patients, etc. depending on the level of care that they require. We promote the appropriate use of ambulances by partially subsidizing these costs. We encourage the use of a manual created in cooperation with related facilities for handling emergency care at a home for the elderly, in order to ensure that transportation to a medical facility is handled smoothly.

Tokyo Children’s Emergency Center
There four facilities designated as Tokyo Children’s Emergency Centers, including the Children’s Medical Center, as centers that must always accept and provide prompt and appropriate lifesaving treatment, in case of a request to accept a severe emergency pediatric patient under the Children’s Emergency Transportation System for patients that are difficult to continue receiving emergency treatment at other medical institutions. The Centers provides lifesaving treatment, while working as a base for medical care coordination and cooperate with other medical facilities to ensure smooth transfers between hospitals, and also conduct clinical education and training to support hospitals in the area.

(Pediatric) Nighttime and Holidays Medical Service Project
During afternoons on holidays and nighttime every day, the TMG ensures availability of emergency hospitals 365 days a year, mainly for emergency pediatric patients requiring hospital treatment. In addition, at hospitals experiencing a concentration of patients including those with mild symptoms, nurses who can conduct triage are assigned to distinguish patients with higher urgency.

Tokyo Pediatric Medical Care Committee
The TMG is securing and enhancing the pediatric emergency medical care system from initial to tertiary emergency care by establishing a committee comprised of medical institutions, related organizations, and municipalities.

Regional Pediatric Care Training Project
The project conducts clinical training on pediatric care for clinic doctors in Tokyo to improve the regional medical level of pediatric care, and to secure personnel for emergency pediatric care in the region.

Tokyo Rules for Emergency Medical Care
To provide prompt and appropriate emergency medical attention, the TMG is promoting efforts under the “Tokyo Rules for Emergency Medical Care,” comprised of rules on “Prompt admittance of emergency patients,” “Conducting Triage” and “Tokyo Resident’s Understanding and Participation.”

○ Rule 1: Prompt Admittance of Emergency Patients
A system to promptly admit emergency patients will be developed through coordination with emergency hospitals and related organizations, by developing the “Regional Emergency Medical Care Centers” playing the key role of regional emergency care, and by assigning “Emergency Patient Coordinators” at the Tokyo Fire Department to coordinate the admittance of emergency patients across Tokyo.

Regional Emergency Medical Care Centers
These are medical institutions which coordinate admittance of emergency patients when an emergency medical team is not able to find a medical institution to admit in selection process based on the collaboration system among emergency medical institutions of the region along with the emergency medical team.

Emergency Patient Coordinators
When admittance is difficult in the region through the coordination of a regional emergency medical care center, they coordinate the admittance across Tokyo.

○ Rule 2: Conduct "Triage"
To protect the lives of patients who require immediate medical attention, “triage” to determine the necessity or order of clinical examination will be conducted in various situations in emergency care.

○ Rule 3: Residents’ Understanding and Participation
In order to protect the emergency medical
care system that is an important social resource, the Tokyo residents will try to use the system appropriately.

The TMG ensures comprehensive perinatal medical care system to provide efficient care in communities corresponding to various risks during pregnancy, labor and neonatal so that people can give birth to and raise children with peace of mind.

Securing the Functions of Perinatal Medical Care Center
The TMG will support the management of the perinatal medical care centers that have NICU (neonatal intensive care unit) and ability to respond appropriately in emergency situations for the pregnant women or women in labor with high risk and newborn babies and will strengthen its function.

Subsidy for Maintenance Expenses of Perinatal Medical Facilities
The TMG will support the maintenance of facilities and equipment of perinatal medical care centers to enhance the perinatal medical care system.

Operation of Comprehensive Perinatal Medical Center for Mother
The TMG designates the “Comprehensive Perinatal Medical Center for Mother (so-called “Super Comprehensive Perinatal Center”)” at perinatal medical centers, which cooperates with doctors in emergency department and provides life-saving measures and always accepts the transfer request for pregnant women in severe condition.

Coordinator for the Transfer of Perinatal Patients
The TMG allocates coordinators who mainly make adjustments for the transfer of patients between communities under the jurisdiction of the Comprehensive Perinatal Medical Center to facilitate a prompt transfer of mother and child who require immediate medical attention.

Securing of Cooperating Perinatal Hospital (Operating on Weekends, Holidays and Night Hours)
The TMG’s designates “Cooperating Perinatal Hospitals” as an emergency medical institution that can address pregnant women or women in labor with medium risks while also supporting facility improvements to ensure emergency medical care for pregnant women or women in labor on weekends, holidays and night hours.

It also supports establishment of NICU at Cooperating Perinatal Hospitals.

Establishment of Perinatal Network Group
By establishing perinatal network groups which consist of initial, secondary, and tertiary perinatal medical institutions centering on Perinatal Mother-Child Medical Centers, the TMG strengthens the cooperation system and role-sharing function of perinatal medical care facilities and creates a framework to provide medical care according to the types of risks of pregnant women (fetuses) and infants.

Securing Cooperating Neonatal Hospital in Tama
In the Tama area with less perinatal medical care centers compared to other areas, the “Tama Cooperating Neonatal Hospital” will be secured for high-risk newborn babies, to strengthen the admittance system of newborns in Tama.

Training for Transition to In-home Care for Pediatric Patients
To ensure a smooth transition from Perinatal Mother-Child Medical Centers, etc. to home care, etc., this project provides training for different types of jobs, including doctors, nurses, physical therapists, MSW and nurses.

Program to Provide Hospital Beds that Support Discharge to Home Care
For children hospitalized for long periods at NICU, interim beds will be set up before transferring to long-term home care in order to support and to promote a smooth discharge from NICU to home, while also improving the situation of beds being fully occupied at NICU and other facilities.

Support for Transfer to Home Care of Pediatric Patients in NICU, etc.
Costs borne by Perinatal Mother-Child Medical Centers and visiting nurse stations etc. in offering training for overnight home visits and coordination between institutions are subsidized, in order to support a smooth transition by pediatric patients in NICU, etc. to home-based care.

Support for Training of Neonatal Doctors
Subsidies are provided for medical institutions that pay allowances to trainee doctors who choose pediatrics in specialized training after completing clinical training and who will be in charge of neonatal medical care in a NICU, etc., with the aim of training doctors who will work in a NICU and other neonatal
Bracing ourselves for a massive earthquake, the TMG has established a system in which accurate information is gathered and swift and appropriate medical relief actions are taken.

**Medical Relief Actions and Medical Supplies Stocks In Case of Disaster**

In the “Tokyo Metropolitan Disaster Prevention Program,” various emergency measures in case of disaster are stipulated, such as the collection and centralization of medical information, primary medical care systems, patient transportation system for injured persons, etc. Municipal governments are responsible for the dispatch of relief parties to emergency shelters and stocking medical supplies. TMG is responsible for the dispatch of Tokyo DMAT and Tokyo medical relief teams, as well as the provision of medical equipment to be supplied to backup medical facilities.

**Improvement of Disaster Control Base Hospitals**

The TMG maintains “Metropolitan Disaster Control Base Hospitals” to accept mainly severely injured patients in case of a disaster and organize medical relief parties. It also prepares medical supplies and equipment.

**Promotion of Earthquake-Resistant Medical Facilities**

The TMG provides financial assistance for hospitals in Tokyo to evaluate seismic capacity, newly construct/reconstruct, and conduct anti-seismic reinforcement constructions, aiming to further facilitate the earthquake-resistance repair of medical facilities to ensure medical practice in times of disaster.

**Enhancing the Work of Tokyo DMAT (Disaster Medical Assistance Team)**

This project offers specialized training for doctors and nurses, enabling them to provide emergency rescue services in times of metropolitan area disasters such as large-scale traffic accidents.

In order to enhance and strengthen the initial medical response system, certain hospitals, mainly those with Emergency Critical Care Centers, have been designated part of Tokyo DMAT.

In addition, vehicles loaded with foodstuffs, daily foods, communications equipment, etc., are stationed at all Tokyo DMAT-designated hospitals. Furthermore, in order to save sick and injured people and secure safe activities of Tokyo DMAT in the case of a Nuclear, Biological, or Chemical (NBC) disaster, it has designated a NBC special disaster response team.

**Disaster Area Medical Associations**

Relevant parties collaborate over the period spanning the immediate aftermath of a disaster over the medium to long term. This project defines associations comprised of medical-related parties, the police, firefighters, the Self-Defense forces, and the municipalities, to create a disaster-response medical system where relevant parties can collaborate effectively.

**Regional Disaster Medical Collaboration Council**

Under this project, a Regional Disaster Medical Collaboration Council is put together by medical-affiliated parties and the municipalities, in every

  - Medical supplies/equipment

- **Role of municipalities**
  - Medical relief team, etc.
  - Medical supplies/equipment

---

※1 Disaster control base hospital: Mainly accepts serious cases
Disaster control base coordination hospital: Mainly accepts moderate cases
Disaster area medical support hospital: Responds to specialized medical care and chronic conditions, and conducts other medical relief activities

※2 SCU (Staging Care Unit): Temporary medical facility service as air transport base
Secondary Health Maintenance Medical block. The Council meets to consider specific policies in times of disaster, in accordance with the specific regional characteristics including specific medical care circumstances.

**Positioning of Disaster Area Medical Care Coordinator**

In order to ensure that necessary medical care is carried out quickly and appropriately in times of disaster, the Metropolitan Government has set up its own Disaster Medical Care Coordinator units, which are located in each of the Metropolitan Area and the Secondary Health Maintenance Blocks, to ensure smooth implementation and coordination of medical care throughout the Area.

**Improvement of Measures regarding Medical Care in Remote Areas**

This project implements medical care in remote areas such as isolated islands and mountain villages.

**Tokyo Metropolitan Support Organization for Medical Care in Remote Areas**

To ensure smooth and efficient implementation of the medical measures for remote areas, the Tokyo Metropolitan Support Organization for Medical Care in Remote Areas has been established to plan and make adjustments in programs. In addition, the Tokyo Remote Areas Health and Medical Care Affairs Committee, comprised of municipalities in remote areas, relevant medical institutions, academic experts, and other members, is set up within the organization to facilitate general exchange of opinions and coordinate medical care in remote areas.

**Support to Secure Healthcare Professionals**

The TMG works toward ensuring a stable supply of doctors and other medical staff by dispatching doctors graduating from Jichi Medical University and doctors or dentists belonging to university hospitals and other hospitals cooperating in programs, based on the request of municipalities in remote areas, and by also providing a subsidy to municipalities in remote areas for expenses required to hire doctors and other medical staff.

The TMG has also established a facility to offer free job placement services for various medical professions and to dispatch substitute doctors, and it partially subsidizes the cost of on-site tours for medical staff organized by towns and villages of islands, in order to support municipalities in remote areas that face difficulties in securing healthcare professionals.

**Support for Medical Treatment**

If an emergency patient, who cannot be treated at a medical institution at an island location, presents for treatment, the TMG has a system in place 24 hours a day/365 days a year to transport said patients to an advanced medical institution, with Tokyo Metropolitan Hiroo Hospital serving as the base hospital for the island areas, using the Tokyo Fire Department or Maritime Self-Defense Force helicopter, or other method. In addition, the patient transport system is enhanced by entering into cooperative agreements with private and national hospitals with rooftop heliports, who will also accept patients.

Furthermore, an electronic image transmission system is being utilized to support medical treatment linking medical institutions in island locations and Tokyo Metropolitan Hiroo Hospital to exchange information such as X-ray and CT images and allow island hospitals to receive advice from medical specialists while remaining in situ. Moreover, the TMG coordinates to secure medical specialists and provides a subsidy for specialized treatment, such as for the eyes, ear, nose and throat, conducted at municipalities in remote areas.

**Development of a System to Provide Medical Care**

In order for medical institutions in remote areas to secure a foundation for treatment, the TMG subsidizes the expenses required for maintenance of clinics and purchase of medical equipment.

**Securing and Improvement of Medical Human Resources**

This project seeks to ensure a steady flow and improvements in quality of medical care professionals—individuals capable of providing quality services, from the perspective of patients (Metropolitan area residents).

**Measures for Securing Doctors**

- **Tokyo Regional Health and Medical Care Affairs Committee**
  
  This committee, which is comprised of medical personnel and Tokyo residents, considers how to secure stable medical care human resources such as doctors.

- **Tokyo Regional Health Care Support Center**
  
  Based on the policy to secure doctors decided by the Tokyo Regional Health and Medical Care Affairs Committee, the Center promotes measures to secure doctors based on the characteristics of Tokyo, such as support for medical institutions to secure doctors, support for career development of persons who hold a scholarship loan, understanding of the actual situation of securing doctors, and sending of information on measures to secure doctors.

- **Tokyo Metropolitan Scholarship System for Regional Health Care Doctors**
  
  The TMG secures adequate number of doctors to work for pediatrics, obstetrics and gynecology, emergency department or remote area medical care, through scholarship loans to medical students in Tokyo and by providing educational assistance in cooperation with universities.

- **Tokyo Metropolitan Project for Doctors Supporting Regional Health Care**
  
  The TMG secures health care systems in the Tama
area and island areas by employing doctors as TMG employees to be dispatched to medical institutions in remote areas and public hospitals.

**Measures to Ensure Sufficient Nursing Staff**
- **Tokyo Nursing School**
  The TMG owns seven nursing schools to train nurses to work for medical institutions in Tokyo. In FY2016, the seven schools had 562 graduates, which account for 10% of the total number of graduates from nursing schools within Tokyo.

- **Subsidy for Costs of Operating Nursing Schools**
  TMG subsidizes the costs required to operate nursing schools or training centers, in order to improve the quality of education provided and recruit nurses to make up the current shortfall in the metropolitan area.

- **Tokyo Nurse Plaza**
  To secure and improve the quality and retention rates in Tokyo, the TMG offers employment consultations, job placement, and reemployment training for public health nurses, midwives, nurses, and licensed practical nurses.

- **Loan for Costs Relating to Nursing Training**
  Student resident within Tokyo, who are training as public health nurses, midwives, nurses or licensed practical nurses and who plan to work in nursing in Tokyo in the future, may access loans for the cost of their studies. This program aims to improve the retention and the quality of nurses in Tokyo.

- **Support Program to Promote the Retention of Nurses**
  The TMG supports activities of hospitals to secure nurses by assigning employment assistants to patrol and visit hospitals and by promoting group training based on secondary health care zones. The program aims to build a structure in which nurses can continue working free from care.

- **Maintenance of Training System for Newly-employed Nurses**
  To prevent early resignation of newly-employed nurses, the TMG encourages the enhancement of clinical training at hospitals.

- **Community Support to Secure Nurses in Regional Health Care**
  The TMG supports reemployment of nurses by offering training for and consultation on reemployment in communities.

- **Promotion of Opening and Training of Outpatient Nursing Consultations**
  To enhance home medical care and to improve the qualifications of the nursing staff, through coordination with doctors, the TMG supports the development of facilities and training for outpatient nursing consultations for its opening, which provides patients with guidance and care.

- **Training for Opening of Midwifery Centers/Outpatient Midwifery Clinics in Hospitals**
  Training is offered for managers within medical facilities and midwives, in order to promote the opening of midwifery centers and outpatient midwifery clinics within hospitals, with the aim of ensuring a high quality of service is provided to metropolitan residents (patients), and retaining medical staff.

- **Promotion of Retention of Nurses in Island Areas**
  By making trips to island areas for training and dispatching short-term substitute nurses, improve the work environment and promote the retention of nurses working in island areas.

**Measures to Retain Medical Staff**
- **Tokyo Metropolitan Center to Support Improvement in Medical Work Environment**
  The Tokyo Metropolitan Center to Support Improvement in Medical Work Environment has been established as a base to promote better work environments for healthcare professionals. The center has built a consultation system by a team of experts on labor management and health service management, and supports initiatives by medical institutions to improve work environments.

- **Improving the Working Environment and Supporting Reemployment of Doctors and Nurses**
  The TMG improves the working environments of doctors and nurses working at hospitals, promotes reductions of turnover and retention, and supports the reemployment of doctors, etc. who have been away from work due to childbirth and child-rearing.

- **Improvement of the Quality of Medical Staff Members**
  Various workshops and lectures are conducted to address the advancing and diversifying health and medical services and improve the quality of medical staff members.

- **Designation and Guidance for Training Schools**
  Based on the national laws and regulations of training schools for medical care providers, the TMG provides approvals for designation or partial changes, and guidance. It also works as an intermediary with the national government, and provides requests for designation or partial changes for some training.

**Ensuring Medical Safety**

Medical safety measures are promoted by the TMG so that the quality of medical services is improved and all residents are provided with safe, secure and satisfying medical care.

**Authorization, Inspection and Supervision of Medical Institutions**

Based on the Medical Service Law, the TMG has the right to authorize founding of hospitals and medical corporations. It also conducts on-site inspections to check whether the institution meets predefined criteria set by the Medical Service Law, such as number of medical employees and adequate facilities.
Medical Safety Support Center Project
The TMG supports the five Public Health Centers in Tama region, cities with health centers and Medical Safety Support Centers located in Special wards as well as consulting with residents regarding medical issues at “Patients’ Voice Consultation Counter.”

Medical Safety Support Center
Centers have been established in prefectural municipalities with cities establishing public health care centers and special wards in accordance with the Medical Care Law revised in April 2007. Centers 1) respond to requests for consultation and complaints regarding medical matters and advise medical institutions and residents; 2) provide information necessary to secure medical safety; 3) provide training on medical safety; and, 4) provide support necessary to secure medical safety in specified areas.

Postmortem Examination and Autopsy
The Tokyo Metropolitan Medical Examiner’s Office in each ward conducts postmortem examinations and autopsies according to the Postmortem Examination and Corpse Preservation Act, to find out the cause in cases of unusual death, so as to improve maintenance of social order, prevention of disease, and promotion of public hygiene.

The operation is commissioned to doctors’ associations and universities, etc., in the Tama and Island areas.
TMG has emphasized the implementation of comprehensive regional health services from the viewpoint of a Tokyo resident, such as “Proactive health improvement for each Tokyo resident,” “Cancer prevention measures,” “Support for patients with intractable disease and atomic bomb survivors,” and “Comprehensive measures against suicide.”

TMG also supports the sound management of the National Health Insurance System that serves as the foundation for the universal health insurance system and the Medical Care System for the Elderly Aged 75 and Older.

Public Health Centers/Municipal Health Centers

Public Health Centers are established for the purpose of contributing to the maintenance and improvement of residents’ health. Each Public Health Center engages in wide-ranging, technical and professional operations to improve the health of the community, while Municipal Health Centers provide health consultations and examinations to the residents of the area.

Promotion of Comprehensive Measures against Suicides

The issue of suicide shall not be considered as a personal problem, but as a social problem which is caused by various social factors and is preventable with the adequate support of society. The TMG, by encouraging society as a whole to work on the issue, promotes Comprehensive Measures against Suicide to realize a city where everyone values life and where everyone can live with ease.

“Kokonabi” is a website which collates information relating to anti-suicide measures within the Tokyo Metropolitan area.

Tokyo Conference for Comprehensive Measures against Suicide

The Conference will study comprehensive measures
to prevent suicide by understanding the current situation of suicides in Tokyo while promoting cooperation with related organizations. In addition, it is working to develop “Tokyo Metropolitan Comprehensive Plans for Measures against Suicide (tentative name.)”

**Tokyo Metropolitan Regional Centers for Promoting Measures against Suicide**

Tokyo Metropolitan Regional Centers for Promoting Measures against Suicide have been established with the aim of effectively promoting comprehensive measures to prevent suicide in line with the situation in various municipalities, and support for municipalities has been strengthened in this area.

**Prevent Suicide! Tokyo Campaign**

The campaign aimed to prevent suicides has been conducted in September and March to promote understanding about the status of suicides and to raise awareness of suicide issues and the need for the society as a whole to take measures.

**“Kokoro-to-Inochi no Hotline (Minds and Lives Hotline)”**

The TMG has set up a dedicated counseling hotline to provide counseling to suicidal persons, while coordinating with professional counseling organizations in various fields, and actively supports those in need of counseling.

**Tokyo Metropolitan “Kokoro-to-Inochi no Support Net (Minds and Lives Support Network)”**

The TMG has set up a consultation desk to prevent survivors of suicide attempts from attempting suicide again, by connecting survivors, who are transported to emergency medical institutions, or consultation and support organizations in the community, and who can continuously provide support.

**Tokyo Network of Counseling and Support**

Due to the various issues behind suicide, the TMG will build a network composed of related institutes and organizations to provide suicidal persons with appropriate consultation and support.

It has also provided information by setting up consultation desks, etc. to support the families of suicide victims.

Furthermore, through workplace lectures, etc., it contributes to creating a working environment where people are not driven to suicide.

**Consultation on Suicide Using SNS**

In order to strengthen measures to prevent suicide among young people, the TMG provides consultation services on suicide using SNS as a trial.

---

**Health Promotion**

To realize a society where you can live healthily throughout your life, society as a whole will support and comprehensively promote health improvements that each Tokyo resident can adopt on their own initiative.

**Promotion of “Tokyo Metropolitan Health Promotion Plan 21 (Phase 2)”**

The “Tokyo Metropolitan Health Promotion Plan 21 (Phase 2)” was formulated in March 2013, with overall goals to “Extend healthy life expectancy” and “Reduce health disparities.” Goals were also outlined for 14 fields, including “Cancer,” “Diabetes and Metabolic Syndrome,” and “Mental health” as priority fields. In order to prevent the development and progression of lifestyle-related diseases and to improve lifestyles, TMG will promote higher awareness in a wider area, support the initiatives taken by municipalities, service providers and medical insurers, and strengthen their collaboration to promote better health for Tokyo residents.

**Prevention of Lifestyle Diseases**

Through education on a healthy diet and physical activity (activity in daily life, exercise), using “Japanese Food Guide Spinning Top” and “2013 Physical Activity Standards and Guidelines for Better Health (Active Guide),” and development of human resources on health promotion, the TMG promotes the prevention of lifestyle diseases such as diabetes.

- **Diabetes Prevention Measures**
  
  The TMG supports initiatives using videos to prevent diabetes by raising awareness and educating the metropolitan population about prevention. It also widely promotes the need to improve lifestyle habits, and the importance of early and continued treatment. In addition, it organizes symposiums for workplaces and supports initiatives taken by corporations, medical insurers, etc. to prevent diabetes.

- **Health Promotion through Facilities for Food Services and Restaurants**
  
  The TMG provides guidance and advice to food service providers on nutrition management in accordance with the characteristics of individual facilities, thus promoting Tokyo residents’ health through food services. It also promotes initiatives to increase the number of restaurants with vegetable-based menus.

- **Personnel Development to Encourage Health Promotion**
  
  In order to promote the health-building plan for Tokyo residents, the TMG will foster personnel that can take on the role of promoting health improvements within municipalities and medical insurers.

- **Education of Health Promotion in Daily Life**
  
  In order to facilitate residents in autonomously
improving their lifestyle habits towards a healthier way of life, through, for example, consuming a larger quantity of vegetables, or walking further each day, the TMG has partnered with related organizations to collate walking maps of various metropolitan areas, and improved its web portal. These measures aim to improve the environment for education and practical application of measures that can be taken simply to make daily life healthier.

Prevention and Early Detection of Cancer

The “Tokyo Metropolitan Plan to Promote Cancer Control Programs (Phase 2 revision)” (period: FY2018 -FY2023) was formulated in March 2018 as the comprehensive plan that covers from cancer prevention, treatment to higher quality of recuperation. Together with the “Tokyo Metropolitan Health Promotion Plan 21 (Phase 2),” the TMG will step up measures to prevent cancer.

(Image) Be good to yourself. Take a cancer screening test.

- Program to Raise Cancer Screening Rate and Accuracy Control in the Community

The TMG strives to boost the rate of scientifically-based cancer screenings conducted by municipalities, while establishing a collaboration system with related agencies so that municipalities can understand detailed examination results. It also promotes improvements to the percentage of examinees who underwent detailed examination and ensures that those who have not undergone a detailed examination do so. Furthermore,
lectures on accuracy control are also conducted for organizations commissioned for cancer screening.

- **Cancer Screening Campaign**
  To achieve early detection of cancer, the TMG, in cooperation with media and relevant organizations, promotes the campaign to increase the rate of residents receiving screening for highly-mortal cancers such as breast cancer or large intestine cancer.

- **Program to Promote Cancer Screening**
  In order to stimulate the momentum for cancer control measures including cancer screening among autonomous bodies and corporations, the TMG encourages municipalities and corporations to issue the “Declaration on Cancer Control,” in order to promote cancer control measures, and promotes voluntary actions of each body.

- **Development of Support System for Cancer Screening**
  The TMG will develop a support system for cancer screening by providing technical training for physicians and others engaged in giving breast cancer screenings via mammography and stomach cancer screening via gastrofiberscopy.

**Measures against Harmful Health Effects of Tobacco/Cigarette**

- **Education regarding the Effects of Smoking on Health**
  Educational measures for the underage will be promoted in order to prevent smoking, such as inviting poster designs on smoking prevention for underage people, and distributing leaflets to junior high school students.

- **Measures to Prevent Passive Smoking**
  The TMG promotes measures to prevent passive smoking by building awareness among Tokyo residents and related organizations, and by supporting municipalities to develop a system for enforcing the Tokyo Metropolitan Ordinance concerning the Prevention of Passive Smoking (tentative name).

**Measures to Counteract COPD (Chronic Obstructive Pulmonary Disease)**

- A booth allowing people to test themselves and find their own “lung age” will be installed at various events etc. in order to educate people about COPD (Chronic Obstructive Pulmonary Disease), as well as the need to raise awareness, prevent onset, encourage early detection and ensure early treatment, and to develop an awareness of the further need to inform family members.

**National and Local Cancer Registry**

- The TMG is registering information related to cancer patients in order to make estimates of the cancer incidence rate and survival rate. This enables the TMG to determine the actual state of affairs concerning cancer in Tokyo in the aim of evaluating and promoting cancer countermeasures.

**Promotion of Mental Health**

- Adequate rest and coping with stress are important in maintaining mental health. Promotion and education on how to cope with stress, and creation of communities and workplaces where people can easily seek consultation are called for.

**Support for Patients with Intractable Disease and Atomic-bomb Survivors**

- Since there is currently no effective cure established for intractable diseases, they require long-term treatment. The TMG supports, in cooperation with the Japanese government, patients with intractable diseases in the search for cures and the recuperation of the patients. It also provides support for atomic-bomb survivors and measures for viral hepatitis.

**Subsidization of Medical Expenses**

- As subsidy for the medical expenses of intractable diseases, the TMG subsidizes a part of the self-pay burden of medical expenses and costs of long-term insurance services (only partial subsidization is available) for nationally designated diseases and other TMG designated diseases.
  
  Subsidy for medical expenses is also provided to patients with renal insufficiency and require undergoing dialysis, such as patients with congenital blood coagulation factor disorder.

**Temporarily Hospital Admission of Intractable Disease Patients living at Home**

- The TMG has beds at hospitals in Tokyo for patients with intractable disease normally living at home, in case the care provider, such as a family member, becomes temporarily unavailable to provide nursing care due to illness or accident.

**Home-visiting Nursing Care for Intractable Disease Patients Living at Home**

- A medical team comprised of expert physicians and home doctors offers consultations at the homes of patients who are bed-ridden or have difficulties receiving treatment.

**Home-visiting Nursing Care for Intractable Disease Patients on an Artificial Respirator Living at Home**

- The TMG offers home-visiting nursing care outside the limit of the medical service fee for the patients living at home using artificial respirator.

**Project to Install Emergency Power Sources for Intractable Disease Patients on an Artificial Respirator**

- To prepare for power shortages in case of a disaster, the TMG offers support to medical institutions using ventilator therapy, to secure emergency power systems that can be loaned without charge to intractable disease patients who live at home and use an artificial respirator.
Consultation on Home Care for Intractable Disease Patients
Public health nurses at public health centers make home visits, telephone, or meet patients at the health center to provide consultations about home care, so that patients can live comfortably at home.

Medical Network for Intractable Diseases
In order to provide a stable appropriate environment for patients with intractable diseases and their families, related organizations such as local hospitals, cooperating hospitals and public health centers etc. are working together to secure a Medical Care Service System for Intractable Diseases.

Tokyo Metropolitan Intractable Disease Consultation/Support Center
The TMG offers support and consultation for intractable disease patients in communities and also promotes community exchange activities.

1) Tokyo Metropolitan Intractable Disease Consultation/Support Center
Contents: Medical care consultation, Employment consultation, Consultation events on medical care for intractable diseases, Lectures on medical care for intractable diseases

2) Tokyo Metropolitan Tama Consultation/Support Room for Intractable Diseases
Contents: Medical care consultation, Employment consultation

3) Tokyo Metropolitan Peer Consultation Room for Intractable Diseases
Contents: Peer consultation, Exchange meetings of patients and their families

Program to Support Patients with Intractable Diseases Find Employment
Patients with intractable diseases and their families are able to meet in certain locations to interact with supporting agencies, who offer advice on employment and living with their treatment, and where necessary introductions to other related supporting agencies.

Support for Atomic bomb Survivors
The TMG provides health checkups for atomic bomb survivors and their children, medical subsidization and health management benefits for atomic bomb survivors, and health guidance and medical expenses subsidization for the children of atomic bomb survivors.

Measures for Viral Hepatitis
The TMG subsidizes activities on the dissemination/education of correct information about viral hepatitis, while also supporting a system to conduct viral hepatitis screenings at Tokyo public health offices, municipalities and workplaces, and promoting the screenings.

The TMG is also improving the hepatitis treatment network, which links home doctors with medical institutions specializing in hepatology, and offers subsidies for medical expenses for interferon treatment, nucleic acid analog preparation treatment, and interferon-free treatment (treatment involving medication but without using interferon). It also offers subsidies for the costs of detailed examinations for those whose hepatitis virus inspection was positive and for patients being treated for chronic hepatitis and other diseases.

In addition, certain hospitals are designated as “Cooperating Hepatitis Treatment Hospitals,” and the Hepatitis Patient Counseling Center provides counseling to hepatitis patients.

Improvement of Measures for Issues of Blood Supply and Organ Transplantation
Blood Supply programs are conducted to secure a stable supply of the necessary medical blood products. The TMG encourages residents’ understanding of organ transplantations and bone-marrow registrations.

Securing Safe Blood Supply
The TMG adopts educational activities and blood donor registration systems focused on people in their teens and twenties.

Appropriate Use of Blood Supply
The TMG formulates assessment guidelines for medical institutions to conduct self-assessments as well as offering lectures for relevant parties.

Measures for Organ/Bone-marrow Transplantation
The TMG distributes leaflets with donor cards to Tokyo residents, and stations Tokyo Organ Transplantation Coordinators for the purpose of dissemination of information and education to the medical institutions engaged in organ transplantation. The TMG also handles bone-marrow donor registrations, including those used in peripheral stem cell transplantation, at public health centers in Tokyo, especially during “bone-marrow donation promotion month,” to secure potential donors.

Medical Insurance
Medical insurance systems provide the necessary benefits for residents when they are ill or injured, so that everyone can maintain their own health and quality of life. There are three types of insurance in this system; Employees’ Health Insurance (EHI), offered to employees of companies and for their dependents, the National Health Insurance (NHI), offered to self-employed workers, residents, and their families, and the medical system for the elderly aged 75 and over, offered for people aged 75 and older (including people aged from 65 to under 75 with a permanent disability). All Japanese citizens are expected to join one of these systems.

A health insurance certificate is issued to all members. One can receive medical care at a reduced cost by presenting the certificate to a medical institution.
**National Health Insurance**

As Japan has a universal healthcare system, everyone must join the NHI unless they are insured by health insurance offered at their workplace.

The NHI insurer is either the prefectural/municipal government or a national health insurance society organized by those who are engaged in the same business or profession. The amount of the insurance premiums (taxes) depends on the insurer.

※ Category 2 Individuals Insured under Long-Term Care Insurance must pay a Long-Term Care Insurance premium (tax), in addition to a premium (tax) for medical care and for support for the elderly.

※ Please ask your municipality’s NHI management division or national health insurance society about the application and other procedures.

**Employees’ Health Insurance**

This type is mainly divided into two parts; Public-corporation-run health insurance, managed for employees of small and medium-sized businesses (operated by Japan Health Insurance Association, also known as “Kyokai Kenpo”) and Society-managed, employment-based health insurance, operated by associations of large companies or by unions of companies within the same profession. Premiums are determined multiplying monthly standard remuneration and the standard bonus (based on one’s salary) by the insurance rate, and are equally shared by the business owner and the insured person (depending on the association).

Insurance benefit is provided for illness, injury, childbirth and death of the policyholder (for insured persons and their dependents).

**Medical Care System for the Elderly Aged 75 and Over**

This type is a system for persons aged 75 and older and for persons aged from 65 to under 75 with a permanent disability.

Tokyo Metropolitan Association of Medical Care Services for Older Senior Citizens (Tokyoto Koki Koreisha Iryo Koiki Rengo), organized by all municipalities in Tokyo, is responsible for the management of determining the premium rate and of the medical benefit, whereas the municipalities are in charge of delivering health insurance certificates, collecting premiums, and receiving various notifications.
